Regional sample sizes are unweighted. All other sample sizes, including column totals, are weighted to census data. Cells containing "%" are statistically zero, though at least one response was received. Blank cells indicate zero responses received. Sample sizes below 100 should be interpreted with caution. Because its small population precludes drawing discrete samples over multiple waves, data on Prince Edward Island is not released.*

QM8. How about you? Even if you don't agree with either entirely, please select the statement which is closer to your view:
