Regional sample sizes are unweighted. All other sample sizes, including column totals, are weighted to census data. Cells containing "*%" are statistically zen, though at least one response was received. Blank cells indicate zero responses received. Sample sizes below 100 should be interpreted with caution. Because its small population precludes drawing discrete samples over multiple waves, data on Prince Edward Island is not released.

Q1. Thinking of the various issues and challenges facing Canada, which ones do you personally care about the most?
